

# 1 Getting Started

Please visit [https://numpy.org/doc/stable/user/absolute\\_beginners.html](https://numpy.org/doc/stable/user/absolute_beginners.html) to familiarize yourself with `numpy`. See an example on the back to see how your submissions look like.

## 2 Exercise

Write a block of code to achieve the result for the following problems. Include the `print` command as well to see the output. Please use the standard `import numpy as np` command. For the following exercise, please print your work (block of code and output) in the pdf format, and upload on Moodle.

1. Use the *arange* or *linspace* command to achieve the following. Visit here for more info:  
<https://numpy.org/doc/stable/reference/generated/numpy.arange.html>  
<https://numpy.org/doc/stable/reference/generated/numpy.linspace.html>
  - (a) Provide the correct syntax for printing the number 37 from the array:  
`firstq = [3, 8, 13, 18, 37, 43]`.
  - (b) Provide the correct syntax for printing the number 70 from the array:  
`secondq = [[10, 20, 30, 40], [60, 70, 80, 90]]`
  - (c) Make an array of numbers `x` consisting of the numbers 5, 6, 7, ..., 80.
  - (d) Make an array of vectors `y` consisting of the numbers 2.5, 3, 3.5, ..., 100.
  - (e) Make a vector `z` consisting of the numbers 100, 99, 98, ..., 1 (in that order).
  - (f) Create a row-vector `a` consisting of 15 ones, that is an array 1, 1, 1, ..., 1.
  - (g) Create a row-vector `b` consisting of 13 sevens, that is an array 7, 7, 7, ..., 7.
  - (h) Create a  $2 \times 2$  identity matrix.
  - (i) Create a  $3 \times 3$  zero matrix.
  - (j) Find the dimensions of above mentioned two matrices: (h) and (i).

The dimension of an array (or matrix) can be found as follows

```
vec = np.array([[1, 2, 4], [2, 4, 1]])  
print(vec.shape)
```

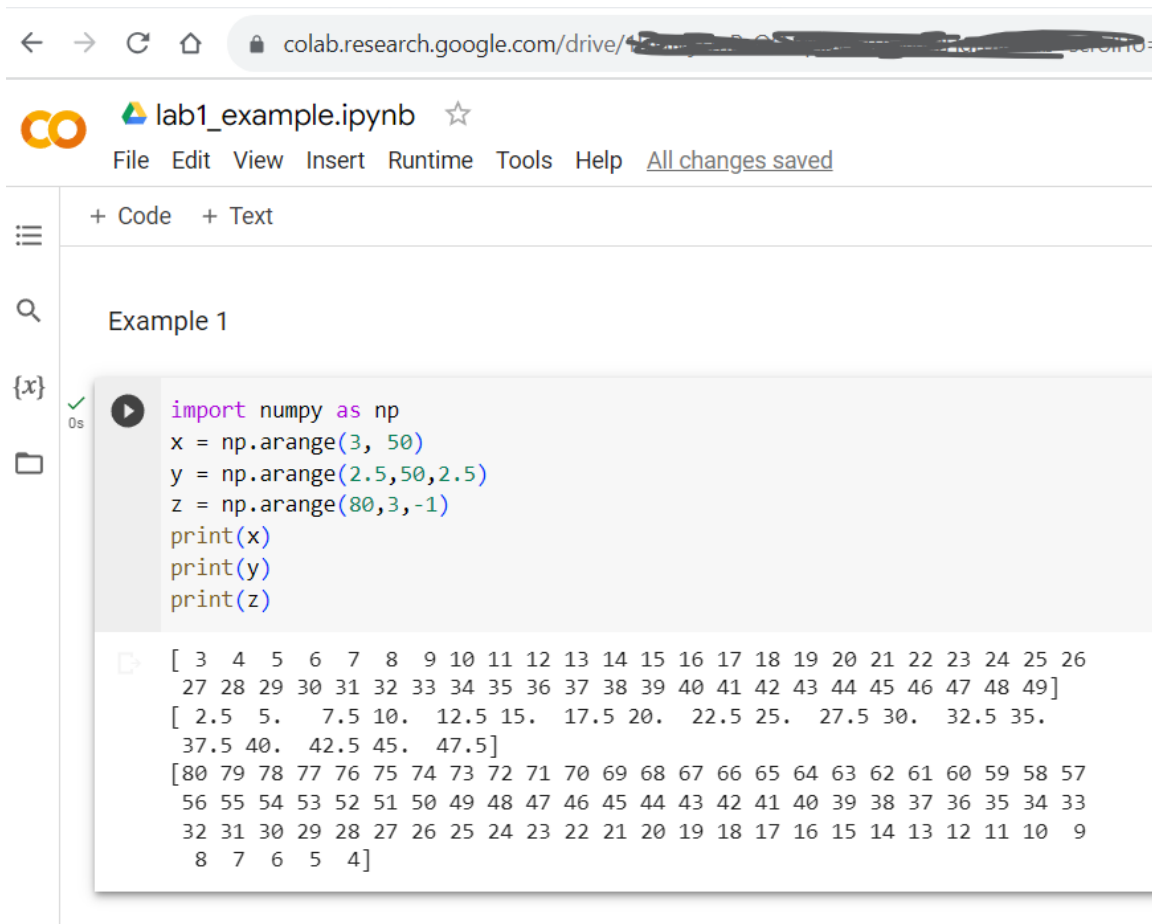

The  $3 \times 3$  identity and zero matrices are as follows:

$$\begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}, \quad \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

### 3 Example 1

For the problems below, your work on Colaboratory could be as shown below.

1. Make an array of numbers x consisting of the numbers 3, 4,.....,50.
2. Make an array of vectors y consisting of the numbers 2.5, 5, 7.5, ..., 50.
3. Make a vector z consisting of the numbers 80, 79, 78, ...,3. (in that order).

The screenshot shows a Google Colaboratory notebook titled 'lab1\_example.ipynb'. The code cell contains the following Python code:

```
import numpy as np
x = np.arange(3, 50)
y = np.arange(2.5, 50, 2.5)
z = np.arange(80, 3, -1)
print(x)
print(y)
print(z)
```

The output of the code is displayed below the code cell:

```
[ 3  4  5  6  7  8  9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26
 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49]
[ 2.5  5.   7.5 10.  12.5 15.  17.5 20.  22.5 25.  27.5 30.  32.5 35.
 37.5 40.  42.5 45.  47.5]
[80 79 78 77 76 75 74 73 72 71 70 69 68 67 66 65 64 63 62 61 60 59 58 57
 56 55 54 53 52 51 50 49 48 47 46 45 44 43 42 41 40 39 38 37 36 35 34 33
 32 31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10  9
  8  7  6  5  4]
```

But for your submission you would print the page (Ctrl+P or equivalent), save as a pdf file. It would look as shown.

8/28/23, 12:57 PM

lab1\_example.ipynb - Colaboratory

Example 1

```
import numpy as np
x = np.arange(3, 50)
y = np.arange(2.5, 50, 2.5)
z = np.arange(80, 3, -1)
print(x)
print(y)
print(z)
```

```
[ 3  4  5  6  7  8  9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26
 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49]
[ 2.5  5.   7.5 10.  12.5 15.  17.5 20.  22.5 25.  27.5 30.  32.5 35.
 37.5 40.  42.5 45.  47.5]
[80 79 78 77 76 75 74 73 72 71 70 69 68 67 66 65 64 63 62 61 60 59 58 57
 56 55 54 53 52 51 50 49 48 47 46 45 44 43 42 41 40 39 38 37 36 35 34 33
 32 31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10  9
  8  7  6  5  4]
```
